

PROJECT ANALYSIS DOCUMENT

Product Support Return Prevention

E-commerce Returns Analytics • January 2026 • Global Stores

1. Executive Summary

This document presents the performance analysis of product support resolutions — known as pillars — in preventing product returns across multiple global Amazon stores during January 2026. The analysis is conducted at both the Order ID level and the ASIN level, enabling a comprehensive view of return avoidance efficacy across regions and product categories.

Dashboard Highlight

The January 2026 dashboard confirms a strong system-wide return avoidance rate of 62.13%, with 452,806 returns avoided out of 727,501 total orders. A total of 465,456 units were prevented from return across 373,756 ASINs — demonstrating the significant operational and financial impact of structured product support interventions.

2. Methodology & Data Sources

Data was extracted using structured SQL queries from the fact_pls_pillar_performance table. The analysis is scoped to FBA fulfillers and four core support pillars:

Support Pillar	Type	Description
Self Help Content	Workflow-based	Content-led self-resolution
Self Help Video	Video-based	Visual guided support
Replacement Parts	Parts-based	Component-level resolution
Manufacturer Support	OEM-based	Brand / OEM escalation

The logic filters specifically for verified third-party (3P) sellers and brand representatives, ensuring data integrity and comparability across store regions.

3. Key Findings — Order ID Level

3.1 Overall Performance

The following metrics reflect order-level return avoidance outcomes for January 2026:

Total Orders Processed: 727,501

Orders Avoiding Return: 452,006 (62.13% success rate)

Reporting Period: January 2026 | Fulfillment Type: FBA

3.2 Store-Level Performance

The table below shows the top-performing stores ranked by return avoidance rate. The FR store leads globally at 68.35%, followed closely by DE and CA — together representing the most effective regional implementations of the return prevention program.

Store	Avoidance Rate (%)
FR (France)	68.35%
DE (Germany)	65.69%
CA (Canada)	64.94%
UK	67.6%
SE (Sweden)	65.3%
ES (Spain)	62.4%
IT (Italy)	62.0%
US	50.9%
PL (Poland)	60.0%

Dashboard Insight

The dashboard visualisation confirms FR as the top performer at 68.8% avoidance rate, with an Avg ASIN Prevention Rate of 0.67. All stores maintain rates above 50%, indicating consistent program efficacy across geographies.

4. Performance by ASIN & Product Category

4.1 Category-Level Impact

The dashboard captures 465,456 total units prevented across all ASINs. The Home category leads with 70,000 units prevented, followed by Electronics (60,000) and Home Improvement (45,000). The table below summarises the top 10 product categories:

Product Category	Units Prevented	Rank
Home	70,000	1st
Electronics	60,000	2nd

Product Support Return Prevention			January 2026 CONFIDENTIAL
Home Improvement	45,000	3rd	
Kitchen	40,000	4th	
PC	34,000	5th	
Wireless	33,000	6th	
Health & Personal Care	28,000	7th	
Automotive	12,000	8th	
Office Products	10,000	9th	
Camera	10,000	10th	

4.2 ASIN Return Prevention Rate

The average ASIN-level return prevention rate across all stores is 0.60 (on a scale of 0.0 to 1.0). Store-level ASIN rates from the dashboard are as follows:

Store	Avg ASIN Prevention Rate
FR	0.67
CA	0.64
SE	0.64
DE	0.64
UK	0.63
ES	0.63
IT	0.63
NL	0.62 / 0.60
US	0.59
PL	0.57

373,756 unique ASINs were analyzed in this study period, confirming broad coverage of the product catalog in the return prevention program.

5. Dashboard-Derived Impacts

The interactive returns analytics dashboard produced for January 2026 surfaces the following headline impacts aligned to this analysis:

Financial & Operational Impact

62.13% of orders did not result in a return — representing significant avoided cost in reverse logistics, restocking, and customer service overhead.
465,456 units were retained in the supply chain, preserving inventory health and reducing waste.

Geographic Impact

FR, DE, CA, and UK stores show the strongest return avoidance performance, each exceeding 64% avoidance rates. US and PL represent areas for targeted improvement.

Category Impact

Home and Electronics categories account for 130,000 of the 465,456 units prevented — nearly 28% of all units — indicating these categories are prime candidates for continued investment in support content.

6. Conclusion & Recommendations

The January 2026 analysis demonstrates the measurable effectiveness of structured product support pillars in reducing return rates across global e-commerce stores. Key takeaways and recommended next steps:

- Expand self-help content and video assets in US and PL stores, where ASIN prevention rates (0.59 and 0.57) trail the global average.
- Invest further in Home and Electronics support content, as these categories show both the highest volume of prevented units and strong engagement with return prevention tools.
- Conduct Voice of Customer (VOC) analysis to identify friction points in support journeys and refine pillar content accordingly.
- Replicate best practices from FR store (68.8% avoidance, 0.67 ASIN rate) across lower-performing geographies through structured knowledge transfer.
- Monitor ASIN-level prevention rates monthly to detect emerging categories with high return-risk for proactive content development.

Overall Program Status: STRONG

With an overall avoidance rate of 62.13% and 452,806 successfully avoided returns, the Product Support Return Prevention program is delivering material impact at scale. Continued investment in content quality, geographic coverage, and VOC integration is recommended to drive further improvement toward a 70%+ avoidance target.
